MATERIAL SAFETY DATA SHEET

**MSDS No:** ECR-01 (MSDS-CR Series Revision:01)

**Product Name:** Lithium-Manganese Button Cell Battery

Issued and Revised Date: 8-Jan 2013

1. PRODUCT AND COMPANY IDENTIFICATION
   
   **Product Name:** Lithium-Manganese Button Cell Battery
   **Applicable Models/ Sizes:** All

   **Supplier Identification:**
   
   SHENZHEN EUNI BATTERY CO., LTD
   Add: 13F, Kangle Buliding, Nanshan, Shenzhen P. R. China
   Tel: +86–755–26077762 Fax: +86–755–86006973

   **Contact Point:**
   
   SHENZHEN EUNI BATTERY CO., LTD
   Add: 13F, Kangle Buliding, Nanshan, Shenzhen P. R. China
   Tel: +86–755–26077762 Fax: +86–755–86006973

2. COMPOSITION / INFORMATION ON INGREDIENTS

   **Information about the chemical nature of product:**

We confirmed the test results based on the UN manual of tests and criteria 383

4. HAZARDS IDENTIFICATION

All chemical materials of lithium-manganese button cell battery cell are stored in a hermetically sealed metal case, designed to withstand temperatures and pressures encountered during normal use. There is no physical danger of ignition or explosion and chemical danger of hazardous materials’ leakage during normal use. However, if exposed to a fire, added mechanical shocks, decomposed, added electric stress by miss-use, the gas release vent will be operated and hazardous materials may be released.

Potential Health Effects:
Cobalt and Cobalt compounds are considered to be possible human carcinogen(s). These chemicals may cause allergic skin sensitization (rash) and irritate eyes, skin, nose, throat, respiratory system.

Since electrolyte is flammable liquid, it does not bring close to fire. It may cause moderate to severe eye irritation, dryness of the skin. Breathing of its mist, vapor or fume may irritate nose, throat and lungs. Exposure of electrolyte material in the area which contains water may generate hydrofluoric acid, which can cause immediate burns on skin, severe eye burn. The ingestion of electrolyte can cause serious chemical burns of mouth, esophagus and gastrointestinal tract.

5. FIRST-AID MEASURES
▷ Eyes: Flush with water for at least 15 minutes. If irritation occurs and persists, contact a medical doctor.
▷ Skin: Remove contaminated clothing and thoroughly wash with soap and plenty of water. If irritation persists, contact a medical doctor.
▷ Inhalation: Remove to fresh air. If breathing difficulty or discomfort occurs and persists, see a medical doctor. If breathing has stopped, give artificial respiration and see
6. FIRE-FIGHTING MEASURE
► Hazardous Combustion Products: When burned, hazardous products of combustion including fumes of carbon monoxide, carbon dioxide, and fluorine can occur.
► Extinguishing Media: Water, carbon dioxide, dry chemical, or foam.
► Basic Fire Fighting Procedures: Wear NIOSH/MSHA approved positive pressure self-contained breathing apparatus and protective clothing to prevent contact with skin and eyes.
► Unusual Fire & Explosion Hazards: This material does not represent an unusual fire or explosion hazard.
  Flash Point: 38°C (CC) (100F)
  Autoignition Temperature: No Data.
  Flammability Limits in Air, Lower, % by Volume: 1.4
  Flammability Limits in Air, Upper, % by Volume: 11

7. ACCIDENTAL RELEASE MEASURES
► Procedure for Release and Spill: Sweep up and place in a suitable container, dispose or waste according to all local, state and Federal Laws and Regulations.
► Before cleanup measures begin, review the entire MSDS with particular attention Potential Health Effects; and on Recommended Personal Protective Equipment.

8. HANDLING AND STORAGE
► Handling
  Specific safe handling advice: Never throw out cells in a fire or expose to high temperatures. Do not soak cells in water and seawater. Do not expose to strong oxidizers.
  Do not give a strong mechanical shock or throw down. Never disassemble, modify or deform. Do not connect the positive terminal to the negative terminal with electrically conductive material.
► Storage conditions (suitable, to be avoided): Do not place the battery cell near heating equipment, nor expose to direct sunlight for long periods. Elevated temperatures can result in shortened battery cell life and degrade performance.
  Store in cool place (temperature: -20-45°C, humidity: 45-75%).
  Incompatible products: Conductive materials, water, seawater, strong oxidizers and strong acids
  Packing material (recommended, not suitable): Insulative and tearproof materials are recommended.

9. EXPOSURE CONTROLS / PERSONAL PROTECTION
► Engineering controls: Investigate engineering techniques to reduce exposures use with adequate ventilation and recommended personal protective equipment.
► Eye/Face protection: Use good industrial practice to avoid eye contact. Processing of this product releases vapors or fumes which may cause eye irritation. Where eye contact may be likely wear chemical goggles and have eye flushing equipment available.
► Skin protection: Minimize skin contamination by following good industrial hygiene practices. Wearing protective gloves is recommended. Wash hands and contaminated skin thoroughly after handling.
► Respiratory protection: Avoid breathing dust and processing vapors. When adequate ventilation is not available, wear a NIOSH/MSHA respirator approved for protection
against inorganic dusts.
- Special clothing: Robber gloves.

10. PHYSICAL & CHEMICAL PROPERTIES
Physical state: Solid
Form: Geometric solid
Color: Metallic color (without outer PVC cover)
Odor: No odor
pH: Not Applicable
Flash point: Not Applicable
Explosion properties: Not Applicable
Density: Not Applicable
Solubility: Not Soluble

11. STABILITY AND REACTIVITY
Hazardous reactions may occur under some specific conditions.
- Conditions to avoid: When a battery cell is exposed to an external short-circuit, crushes, modification, high temperature above 100 degree C, it will be the cause of heat generation and ignition. Avoid to be exposed to direct sunlight and high humidity.
- Materials to avoid: Conductive materials, water, seawater, strong oxidizers and strong acids.
- Hazardous decomposition products: Acid or harmful gas is emitted during fire.

12. TOXICOLOGICAL INFORMATION
Eco Toxicological Information: No information available.
Local Environmental Effects: Unknown.
Since some internal materials remain in the environment, do not bury or throw out into the environment.

13. DISPOSAL INFORMATION
Waste disposal must be in accordance with the applicable regulations. Disposal of the lithium-manganese button cell battery cells should be performed by permitted, professional disposal Page:
firms knowledgeable in State or Local requirements of hazardous waste treatment and hazardous waste transportation. Incineration should never be performed by battery but users, eventually by trained professional in authorized facility with proper gas and fume treatment.

Their regulations are based on the UN Recommendations. Each special provision provides specifications on exceptions and packaging for lithium batteries shipping. The product can be transported as "Non Dangerous Goods" when they meet the requirements of packing instruction 968 section II or 969 section II or part 970 section II of IATA-DGR (51st edition) or SP188 of IMO-IMDG Code. Shipping.
15. DISPOSAL CONSIDERATIONS.
Lithium batteries are best disposed of as a non-hazardous waste when fully or mostly siderecharged. The Federal Environmental Protection Agency (EPA) do not list Lithium as a hazardous waste. However, if waste lithium batteries are still fully charged or partially discharged, they can be considered a reactive hazardous waste because of significant amount of unreacted lithium in the battery. The battery must be neutralized through an approved secondary treatment facility prior to disposal as a hazardous waste. Secondary treatment centers receive these batteries as manifested hazardous waste under code "D003-reactive." Use a professional disposal firm for disposal of mass quantities of undischarged lithium batteries. DO NOT INCINERATE or subject battery cells to temperatures in excess of 212° F. Such treatment can cause cell rupture.

Remark: The batteries are safe for transportation, and it is advised to use dry powder fire extinguisher in case of explosion or inflammation.
