J Series® JE2835 Color LEDs

PRODUCT DESCRIPTION

J Series® LEDs extend Cree LED’s industry leading portfolio of lighting class LEDs to a broader set of applications. With 14 available colors, the JE2835 N Class color LED family offers top performance and the broadest range of options available in a mid-power LED. JE2835 N Class color LEDs use a standard 2835 package, with most colors having the same polarity as Cree LED’s numerous 2835 white LED options.

JE2835 N Class color LEDs are optimized for low-density and linear lighting applications, including architectural, horticulture and transportation.

FEATURES

- Industry-compatible size: 2.8 x 3.5 x 0.7 mm
- 3-V configuration
- Available in violet, royal blue, blue, cyan, green, PC lime, PC mint, amber, PC amber, red-orange, PC red-orange, red, photo red, far red, and PC purple
- RoHS and REACH compliant
- UL® recognized component (E495478)

J Series® Products are sold exclusively by Cree Venture LED Company Limited (“Cree Venture”), regardless of geography. Any orders for J Series Products that are submitted to Cree LED or any of its other subsidiaries will be directed to Cree Venture for acknowledgment and order fulfillment.
## PRODUCT SUMMARY - JE2835 3-V N CLASS COLOR LEDS

ORDER CODE & BIN CODE FORMATS

Order codes and bin codes for J Series JE2835 color LEDs are configured in the following manner:

### Order Code

- **Series:** J = J Series
- **Power class:** E = 0.5 W
- **Family name:** 2835
- **Generation:** A = 1st generation
- **Color:**
  - VT = Violet
  - RY = Royal blue
  - BL = Blue
  - CY = Cyan
  - GR = Green
  - PL = PC lime
  - PM = PC mint
  - AM = Amber
  - PA = PC amber
  - RO = Red-orange
  - PO = PC red-orange
  - RD = Red
  - HR = Photo red
  - FR = Far red
  - PP = PC purple
- **Class:** N = N class
- **Internal code**
- **Forward voltage bin**
- **Internal code**

### Bin Code

- **Series:** J = J Series
- **Power class:** E = 0.5 W
- **Family name:** 2835
- **Generation:** A = 1st generation
- **Color:**
  - VT = Violet
  - RY = Royal blue
  - BL = Blue
  - CY = Cyan
  - GR = Green
  - PL = PC lime
  - PM = PC mint
  - AM = Amber
  - PA = PC amber
  - RO = Red-orange
  - PO = PC red-orange
  - RD = Red
  - HR = Photo red
  - FR = Far red
  - PP = PC purple
- **Internal code**
- **Wavelength or chromaticity bin**
- **Flux group**
- **Forward voltage bin**
- **Internal code**

Notes:
- Cree Venture maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±1 nm on wavelength measurements. See the Measurements section (page 84).
- Cree Venture J Series 2835 LED order codes specify only a minimum flux bin and not a maximum. Cree Venture may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity restrictions specified by the order code.

Notes:
- Cree Venture maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±1 nm on wavelength measurements. See the Measurements section (page 84).
- Cree Venture J Series 2835 LED order codes specify only a minimum flux bin and not a maximum. Cree Venture may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity restrictions specified by the order code.

* PPF values are calculated from luminous or radiant flux values and are for reference only.
** PF\(_{FR}\) values are calculated from radiant flux values and are for reference only.
**PERFORMANCE GROUPS - FORWARD VOLTAGE (T<sub>j</sub> = 25 °C)**

J Series JE2835 color LEDs are tested for forward voltage and placed into one of the following voltage bins.

The following voltage bins are indicated in the Forward Voltage Bin field in the bin code for JE2835 color LEDs.

<table>

REFLOW SOLDERING CHARACTERISTICS

In testing, Cree Venture has found J Series 2835 color LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree Venture recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used, and therefore it is the lamp or luminaire manufacturer’s responsibility to determine applicable soldering requirements.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.

</table>

Note: All temperatures refer to the topside of the package, measured on the package body surface.
NOTES

Measurements
The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree Venture's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

Pre-Release Qualification Testing
Please read the J Series Reliability Overview for the details of the pre-release qualification testing for J Series LEDs.

Lumen Maintenance

Please read the Thermal Management application note for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

Moisture Sensitivity
Cree Venture recommends keeping J Series 2835 color LEDs in the provided, resealable moisture-barrier packaging (MBP) until immediately prior to soldering. Unopened MBP that contains J Series 2835 color LEDs do not need special storage for moisture sensitivity.

Once the MBP is opened, J Series 2835 color LEDs should be handled and stored as MSL 3 per JEDEC J-STD-033, meaning they have limited exposure time before damage to the LED may occur during the soldering operation. The table on the right specifies the maximum exposure time in days depending on temperature and humidity conditions. LEDs with exposure time longer than the specified maximums must be baked according to the baking conditions listed below.

Baking Conditions
It is not necessary to bake all J Series 2835 color LEDs. Only the LEDs that meet all of the following criteria must be baked:

1. LEDs that have been removed from the original MBP.
2. LEDs that have been exposed to a humid environment longer than listed in the Moisture Sensitivity section above.
3. LEDs that have not been soldered.

LEDs should be baked at 60 ºC for 24 hours. LEDs may be baked in the original reels. Remove LEDs from the MBP before baking. Do not bake parts at temperatures higher than 60 ºC. This baking operation resets the exposure time as defined in the Moisture Sensitivity section above.
NOTES - CONTINUED

RoHS Compliance
The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the Product Ecology section of the Cree website.

REACH Compliance
REACH substances of very high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACH SVHC Declaration. REACH banned substance information (REACH Article 67) is also available upon request.

UL® Recognized Component
This product meets the requirements to be considered a UL Recognized Component with Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

Vision Advisory
WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the J Series LED Eye Safety application note.
MECHANICAL DIMENSIONS

J Series JE2835 color LEDs are configured in one of two groups, such that each group of LEDs has the opposite polarity of the other.

Group 1
Violet, royal blue, blue, cyan, green, PC lime, PC mint, PC amber, PC red orange, PC purple

Vias, if present, are not shown on these drawings.
All measurements are ±0.1 mm unless otherwise indicated.

All measurements are ±0.1 mm unless otherwise indicated.
MECHANICAL DIMENSIONS - CONTINUED

J Series JE2835 color LEDs are configured in one of two groups, such that each group of LEDs has the opposite polarity of the other.

Group 2
Amber, red-orange, red, photo red, far red

Thermal vias, if present, are not shown on these drawings.
All measurements are ±0.1 mm unless otherwise indicated.

All measurements are ±0.1 mm unless otherwise indicated.

Recommended PCB Solder Pad

Recommended Stencil Pattern
**TAPE & REEL**

All Cree Venture carrier tapes conform to EIA-481D, Automated Component Handling Systems Standard.

All dimensions in mm.
