Introduction

The WM-N-BM-14 wireless WICED module which is a small size module and consists of a Broadcom BCM43362 single-chip, a ST STM32F205RG MCU, and a 2.4G antenna. The WM-N-BM-14 provides for the highest-level integration, featuring 802.11b/g and 802.11n.

It includes a 2.4 GHz WLAN CMOS power amplifier (PA) that meets the output power requirements of most handheld systems. An optional external low-noise amplifier (LNA) and external PA are also supported. Along with the integrated power amplifier, the WM-N-BM-14 also includes integrated transmit and receive baluns, further reducing the overall solution cost.

The small size & low profile physical design make it easier for system design to enable high performance wireless connectivity without space constrain. This multi- functionality and board to board physical interface provides SPI/I2C/I2S/UART interface options.

Hardware WAPI acceleration engine, AES, TKIP, WPA and WPA2 are supported to provide the latest security requirement on your network.

For the software and driver development, USI provides extensive technical document and reference software code for the system integration under the agreement of Broadcom International Ltd.

Hardware evaluation kit and development utilities will be released base on listed OS and processors to OEM customers.
