

PROCESSING CHEAT SHEET

DATA TYPES

Primitive

boolean
byte
char
color
double
float
int
long

Composite

Array
ArrayList
HashMap
Object
String
XMLElement

Conversion

binary()
boolean()
byte()
char()
float()
hex()
int()
str()
unbinary()
unhex()

String Functions

join()
match()
matchAll()
nf()
nfc()
nfp()
nfs()
split()
splitTokens()
trim()

Array Functions

append()
arrayCopy()
concat()
expand()
reverse()
shorten()
sort()
splice()
subset()

Constants

HALF_PI
PI
QUARTER_PI
TWO_PI

Assign variables

```
=          assign value to a variable
;          statement terminator
,          separates parameters in function
           separates variables in declarations
           separates variables in array

/** Assign variables **/
//Format is in variable_type variable_name;
int total;
//Then you can assign a value to it later
total = 0;
//Or, assign a value to it at the same time
int total = 0;
//Note: use one of the primitive data types
on the left
```

Structure: program structure

```
setup()    defines initial enviroment
           properties, screen size,
           background before the draw()
draw()     called after setup() &executes
           code continuously inside its
           block until program is stopped
           or noLoop() is called.
size()     size() must be first line in
           setup() defines dimension of
           display in units of pixels
noLoop()   Stops Processing from executing
           code within draw()
           continuously
```

```
/** Example **/
void setup() {
  size(200, 200);
  background(0);
  fill(102);
}
void draw() {
  //Draw code here
}
```

2D Primitives

```
point()    draws a point
           point(x, y)
           point(x, y, z)//3D
line()     draws a line
           line(x1, y1, x2, y2)
           line(x1, y1, z1, x2, y2, z2)//3D
rect()     draws a rectangle
           rect(x, y, width, height)
ellipse()  Draws an ellipse
           ellipse(x, y, width, height)
arc()      draws an arc
           arc(x, y, width, height, start, stop)
```

```
/** Arc (portion of circle) **/
//x & y = coords, width & height = size
//start + stop = starting and end points
(think angle in radians) of circle in  $\pi$  pie
LINK
arc(x, y, width, height, start, stop)
arc(100, 100, 50, 50, PI, 2*PI)//Sad Face
arc(100, 100, 50, 50, 0, PI)//Happy Face
//Note: Play around with start and stop. Use
PIE constants or math operators PI/3 , .5*PI
```

Relational

```
==         equality
>          greater than
>=         greater than or equal to
!=         inequality
<=         less than or equal to

/** Example **/
if(total == 100){
  //Then do this
}
```

Iteration

```
while      executes statements while the
           expression is true
for        loop continues until the test
           evaluates to false

/** while Example **/
while(total < 100){
  total++; //adds 1 to total
}

/** for Example **/
for(int i=0; i< 100; i++){
  //Do something here
}
```

Conditionals

```
if         if statement evaluates to true
           then execute code
else       extension of if statement
           executes if equals false
else if    extension of if statement
           executes if equals true

/** if / else / else if **/
if(total == 100){
  //total is equal to 100
}
else
if(total < 100){
  //total is smaller then 100
}
else{
  //total is bigger then 100
}
```

Coloring stuff

```
background() sets background color in RGB or
             hexadecimal color
             background(value1, value2,
             value3)
             background(hexadecimal_value)
fill()       sets color for shape
             fill(value1, value2, value3)
             fill(hexadecimal_value)
stroke()     sets color for shape
             stroke(value1, value2, value3)
             stroke(hexadecimal_value)

/** Example **/
//Note call fill or stroke before every shape you
are planning on using different colors on each
stroke(#CCCCFF);
fill(#FFFCCC);
rect(100,100,50,50);
```

CONTROL

Relational Operators
 == (equality)
 > (greater than)
 >= (greater than or
 equal to)
 != (inequality)
 < (less than)
 <= (less than or equal
 to)

Iteration

for
while

Conditionals

break
case
?: (conditional)
continue
default
else
if
switch()

Logical Operators

&& (logical AND)
 ! (logical NOT)
 || (logical OR)
