This board offers several strapping options:
- JO1, JO2, JO3, JO4 allow for the mounting holes to be connected to ground.
- JSG, JGR tie the V rails to ground, so V can be used interchangeably with ground. This is useful for digital logic circuits when only require ground and VCC.
- TIE+1, TIE-1, TIE+2, TIE-2 allow the rails at the top of the board to be tied to their equivalent rails at the bottom of the board. This is intended for circuits that use bipolar power supplies (such as +12V, -12V and ground).
