1. Concept

This device is one chip module with:
- fingerprint algorithm
- optical sensor

The major functions are the followings:
- High-accuracy and high-speed fingerprint identification technology
- Ultra-thin optical sensor
- 1:1 verification, 1:N identification
- downloading fingerprint image from the device
- Reading & writing fingerprint template(s) from/to the device
- Simple UART & USB communication protocol

**Technical Specification**

</table>
4. Protocol: Error Codes

When response packet is Non-acknowledge, *Parameter* represents an error code as below.

<table>
<thead>
<tr>
<th>NACK Parameter</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NACK_TIMEOUT</td>
<td>0x1001</td>
<td>Obsolete, capture timeout</td>
</tr>
<tr>
<td>NACK_INVALID_BAUDRATE</td>
<td>0x1002</td>
<td>Obsolete, Invalid serial baud rate</td>
</tr>
<tr>
<td>NACK_INVALID_POS</td>
<td>0x1003</td>
<td>The specified ID is not between 0~19</td>
</tr>
<tr>
<td>NACK_IS_NOT_USED</td>
<td>0x1004</td>
<td>The specified ID is not used</td>
</tr>
<tr>
<td>NACK_IS_ALREADY_USED</td>
<td>0x1005</td>
<td>The specified ID is already used</td>
</tr>
<tr>
<td>NACK_COMM_ERR</td>
<td>0x1006</td>
<td>Communication Error</td>
</tr>
<tr>
<td>NACK_VERIFY_FAILED</td>
<td>0x1007</td>
<td>1:1 Verification Failure</td>
</tr>
<tr>
<td>NACK_IDENTIFY_FAILED</td>
<td>0x1008</td>
<td>1:N Identification Failure</td>
</tr>
<tr>
<td>NACK_DB_IS_FULL</td>
<td>0x1009</td>
<td>The database is full</td>
</tr>
<tr>
<td>NACK_DB_IS_EMPTY</td>
<td>0x100A</td>
<td>The database is empty</td>
</tr>
<tr>
<td>NACK_TURN_ERR</td>
<td>0x100B</td>
<td>Obsolete, Invalid order of the enrollment</td>
</tr>
<tr>
<td></td>
<td></td>
<td><em>(The order was not as: EnrollStart -&gt; Enroll1 -&gt; Enroll2 -&gt; Enroll3)</em></td>
</tr>
<tr>
<td>NACK_BAD_FINGER</td>
<td>0x100C</td>
<td>Too bad fingerprint</td>
</tr>
<tr>
<td>NACK_ENROLL_FAILED</td>
<td>0x100D</td>
<td>Enrollment Failure</td>
</tr>
<tr>
<td>NACK_IS_NOT_SUPPORTED</td>
<td>0x100E</td>
<td>The specified command is not supported</td>
</tr>
<tr>
<td>NACK_DEV_ERR</td>
<td>0x100F</td>
<td>Device Error, especially if Crypto-Chip is trouble</td>
</tr>
<tr>
<td>NACK_CAPTURE_CANCELED</td>
<td>0x1010</td>
<td>Obsolete, The capturing is canceled</td>
</tr>
<tr>
<td>NACK_INVALID_PARAM</td>
<td>0x1011</td>
<td>Invalid parameter</td>
</tr>
<tr>
<td>NACK_FINGER_IS_NOT_PRESSED</td>
<td>0x1012</td>
<td>Finger is not pressed</td>
</tr>
<tr>
<td>Duplicated ID</td>
<td>0 – 19</td>
<td>There is duplicated fingerprint (while enrollment or setting template), This error describes just duplicated ID</td>
</tr>
</tbody>
</table>
5. Protocol: Command Details

5.1. Initialization (Open)

Open command is used to initialize the device; especially it gets device's static info.

```
typedef struct_devinfo
{
    DWORD FirmwareVersion;
    DWORD IsoAreaMaxSize;
    BYTE DeviceSerialNumber[16];
} devinfo;
```
Description of *devinfo* structure

<table>
<thead>
<tr>
<th>Field</th>
<th>Sample</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>FirmwareVersion</code></td>
<td><code>Firmware Version: 20120225</code></td>
<td>Firmware version</td>
</tr>
<tr>
<td><code>IsoAreaMaxSize</code></td>
<td><code>IsoAreaMaxSize: 0 KB</code></td>
<td>Maximum size of ISO CD image</td>
</tr>
<tr>
<td><code>DeviceSerialNumber</code></td>
<td><code>DeviceSN: EF15EF4016C66250.883F1A4139000000</code></td>
<td>Unique serial number of the device</td>
</tr>
</tbody>
</table>

If the Device's Serial Number is zero, then there is no guarantee for stable operation of the device.
5.2. Termination(Close)

Close command does nothing.
5.3. **CMOS LED control (CmosLed)**

Default state of CMOS (Sensor) LED is OFF state. (But while booting, LED blinks once, this says the LED is OK.) Therefore, please issue LED ON command prior to any capture.

**COMMAND PACKET**
Command = CmosLed
Parameter =
0: Off LED
Nonzero: On LED

**RESPONSE PACKET**
Response = Ack
5.4. Changing UART baud rate (*ChangeBaudrate*)

This command changes the UART baud rate at the run-time.

The device initializes its UART baud rate to 9600 bps after power on.

**COMMAND PACKET**
Command = *ChangeBaudrate*
Parameter = *baud rate* (9600~115200)

**RESPONSE PACKET**
Response = *Ack*:
Response = *Nack*: Error
*NACK_INVALID_PARAM*
5.5. Get enrolled fingerprint count\((\text{GetEnrollCount})\)

**Command Packet**

Command = \text{GetEnrollCount}

**Response Packet**

Response = \text{Ack}

Parameter = Enrolled Fingerprint Count

5.6. Check enrollment status\((\text{CheckEnrolled})\)

**Command Packet**

Command = \text{CheckEnrolled}

Parameter = ID(0~19)

**Response Packet**

Response = \text{Ack}: This ID is enrolled

Response = \text{Nack}: Error

NACK_INVALID_POS

NACK_IS_NOT_USED
5.7. Start an enrollment *(EnrollStart)*

**COMMAND PACKET**
- Command = *EnrollStart*
- Parameter = *ID(0~19)*

**RESPONSE PACKET**
- Response = *Ack: OK*
- Response = *Nack: Error*
  - *NACK_DB_IS_FULL*
  - *NACK_INVALID_POS*
  - *NACK_IS_ALREADY_USED*

5.8. Make 1st template for an enrollment *(Enroll1)*

**COMMAND PACKET**
- Command = *Enroll1*

**RESPONSE PACKET**
- Response = *Ack: OK*
- Response = *Nack: Error*
  - *NACK_ENROLL_FAILED*
  - *NACK_BAD_FINGER*
5.9. Make 2\textsuperscript{nd} template for an enrollment(\textit{Enroll2})

![Diagram of COMMAND PACKET and RESPONSE PACKET for Enroll2]

5.10. Make 3\textsuperscript{rd} template for an enrollment, merge three templates(\textit{Enroll3})

![Diagram of COMMAND PACKET and RESPONSE PACKET for Enroll3]

To enroll a fingerprint, the host must issue above 4 commands, later chapter describes how to organize these commands.
5.11. Check finger pressing status (*IsPressFinger*)

This command is used while enrollment, the host waits to take off the finger per enrollment stage.

**COMMAND PACKET**
Command = *IsPressFinger*

**RESPONSE PACKET**
Response = Ack:
Parameter = 0: finger is pressed
Parameter = nonzero: finger is not pressed
5.12. Delete one fingerprint(DeleteID)

**COMMAND PACKET**
- Command = DeleteID
- Parameter = ID(0~19)

**RESPONSE PACKET**
- Response = Ack: OK
- Response = Nack: Error
- NACK_INVALID_POS

5.13. Delete all fingerprints(DeleteAll)

**COMMAND PACKET**
- Command = DeleteAll

**RESPONSE PACKET**
- Response = Ack: OK
- Response = Nack: Error
- NACK_DB_IS_EMPTY
5.14. 1:1 Verification (*Verify*)

**COMMAND PACKET**
- Command = *Verify*
- Parameter = ID(0~19)

**RESPONSE PACKET**
- Response = *Ack*: OK
- Response = *Nack*: Error
  - NACK_INVALID_POS
  - NACK_IS_NOT_USED
  - NACK_VERIFY_FAILED

---

5.15. 1:N Identification (*Identify*)

**COMMAND PACKET**
- Command = *Identify*

**RESPONSE PACKET**
- Response = *Ack*: OK
  - Parameter = 0~19: identified ID
- Response = *Nack*: Error
  - NACK_DB_IS_EMPTY
  - NACK_IDENTIFY_FAILED
5.16. 1:1 Verification of Template (*VerifyTemplate*)

**COMMAND PACKET**
Command = *Verify*
Parameter = *ID(0~19)*

**DATA PACKET**
Data = *a template (506 bytes)*

**RESPONSE PACKET**
Response = *Ack*: OK
Response = *Nack*: Error
*NACK_INVALID_POS*
*NACK_IS_NOT_USED*

**RESPONSE PACKET**
Response = *Ack*: OK
Response = *Nack*: Error
*NACK_COMM_ERR*
*NACK_VERIFY_FAILED*
5.17. 1:N Identification of Template \((IdentifyTemplate)\)

**COMMAND PACKET**
Command = \(IdentifyTemplate\)

**DATA PACKET**
Data = a template (506 bytes)

**RESPONSE PACKET**
Response = \(Ack: OK\)
Response = \(Nack: Error\)
\(NACK_DB_IS_EMPTY\)

**RESPONSE PACKET**
Response = \(Ack: OK\)
Parameter = 0~19: identified ID
Response = \(Nack: Error\)
\(NACK_COMM_ERR\)
\(NACK_IDENTIFY_FAILED\)
5.18. Capture fingerprint(CaptureFinger)

The fingerprint algorithm uses 240x216 image for its input. This command captures raw image from the sensor and converts it to 240x216 image for the fingerprint algorithm. If the finger is not pressed, this command returns with non-acknowledge.
Please use best image for enrollment to get best enrollment data.
Please use not best image for identification (verification) to get fast user sensibility.
5.19. Make Template(*MakeTemplate*)

This function makes template for transmission. *CaptureFinger* command should be previously issued. Do not use the template for registration.
5.20. Get fingerprint image \((\text{GetImage})\)

Host

**COMMAND PACKET**
Command = \(\text{GetImage}\)

Device

**RESPONSE PACKET**
Response = \(\text{Ack: OK}\)

**DATA PACKET**
Data = 240x216 image (51840 bytes)
5.21. Get raw image (GetRawImage)

**Host**

**COMMAND PACKET**
Command = *GetRawImage*

**Device**

Capture raw image

**RESPONSE PACKET**
Response = *Ack: OK*

**DATA PACKET**
Data = 240x216 QVGA image (51840 bytes)

5.22. Get template (GetTemplate)

**Host**

**COMMAND PACKET**
Command = *GetTemplate*
Parameter = *ID(0~19)*

**Device**

**RESPONSE PACKET**
Response = *Ack: OK*
Response = *Nack: Error*

NACK_INVALID_POS
NACK_IS_NOT_USED

**DATA PACKET**
Data = *a template (506 bytes)*
5.23. Set template (SetTemplate)

**COMMAND PACKET**
- Command = `SetTemplate`
- Parameter = `ID(0~19)`
  (If Parameter’s HIWORD is non-zero, fingerprint duplication check will not be performed.)

**DATA PACKET**
- Data = *a template (506 bytes)*

**RESPONSE PACKET**
- Response = `Ack`: OK
- Response = `Nack`: Error
  - `NACK_INVALID_POS`

5.24. Start database download, obsolete (GetDatabaseStart)

**COMMAND PACKET**
- Command = `GetDatabaseStart`

**RESPONSE PACKET**
- Response = `Ack`

*GetDatabaseStart* command does nothing. It exists for historical reason; it was used for RS232 communication.
5.25. End database download, obsolete (**GetDatabaseEnd**)  

GetDatabaseEnd command does nothing. It exists for historical reason; it was used for RS232 communication.
5.26. Upgrade Firmware (UpgradeFirmware)
Not supported

5.27. Upgrade ISO CD Image (UpgradeISOCDImage)
Not supported

5.28. Set IAP Mode (SetIAPMode)

The Device enter in IAP Mode,
In this mode, FW upgrade is available.

6.1 Capture of the fingerprint image

*IsPressFinger* checks whether a finger placed on the sensor.
This function is used especially while enrollment.

*CaptureFinger* captures a fingerprint image (240x216), if a finger isn’t placed on
the sensor, it returns with error.
If this function returns with success, the device's internal RAM keeps valid
fingerprint image for the subsequent commands. If the host issues other
command, the fingerprint image will be used and destroyed.

*GetRawImage* captures a raw live image (240x216), it doesn’t check whether a
finger placed on the sensor, this function is used for debug or calibration.

6.2 Identifying and Verifying

*Identify* and *IdentifyTemplate* perform 1: N matching operation.
*Verify* and *VerifyTemplate* perform 1: 1 matching operation.

Just before calling of image-related matching functions (*Identify, Verify*), the host
must call *CaptureFinger*.

6.3 Enrollment

An enrollment flowchart is as below.

1. *EnrollStart* with a (not used) ID
2. *CaptureFinger*
3. *Enroll1*
4. Wait to take off the finger using `IsPressFinger`
5. `CaptureFinger`
6. `Enroll2`
7. Wait to take off the finger using `IsPressFinger`
8. `CaptureFinger`
9. `Enroll3`
7. PC Demo

PC demo program describes how to use the device with its source code.
